

COMPRESSOR UNITS

COOLTECH FINLAND OY is a manufacturer of refrigeration compressor units based on screw compressors for freons, ammonia, propane and other refrigerants.

Refrigeration compressor units COOLTECH have a wide range of cooling capacity for many industrial applications.

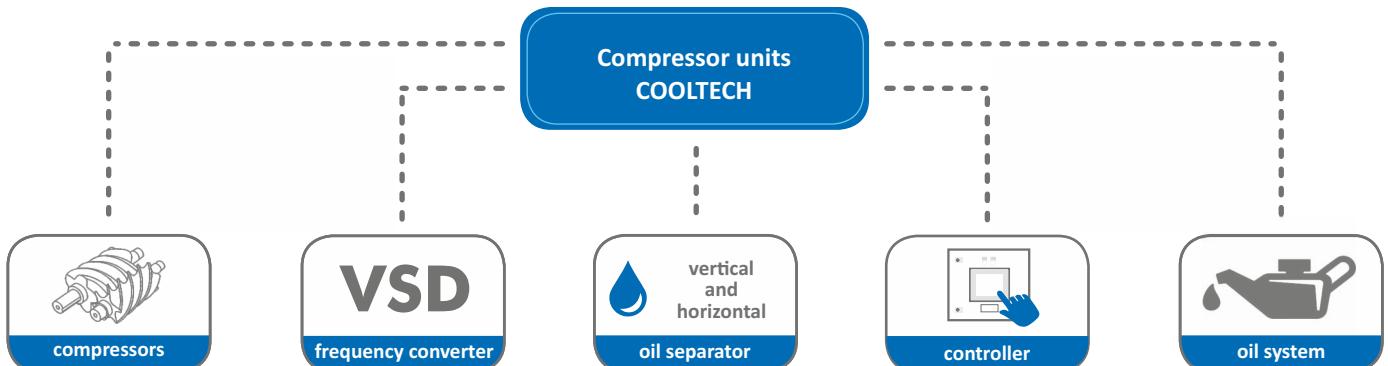

In addition to standard design of compressor units COOLTECH offers individual design for any tasks.

By the using of system with frequency converter, COOLTECH compressor units allow to save up to 18% of electric energy at partial load mods.

Benefits:

- ◆ Automatic capacity control;
- ◆ Use of all major types of refrigerants;
- ◆ Variable speed drive motors with wide speed range from 1500 to 3600 rpm for maximum performance and high efficiency at part load;
- ◆ High reliability of the equipment and low operating costs;
- ◆ Full repairability, low prices and quick terms of delivery for spare parts;
- ◆ Maximum energy efficiency and minimum required space;
- ◆ Possible individual design for each customer;
- ◆ High efficiency oil separator CTX OS series;
- ◆ On-going monitoring of equipment operation by means of UNICOOL control system to minimize operational failures;
- ◆ Simplicity of design, convenience of maintenance of components/elements of the compressor unit.

Model range of COOLTECH compressor units

► **CTX(W) SL 127, 163**

293 - 710 m³/h

► **CTX(W) SL 204**

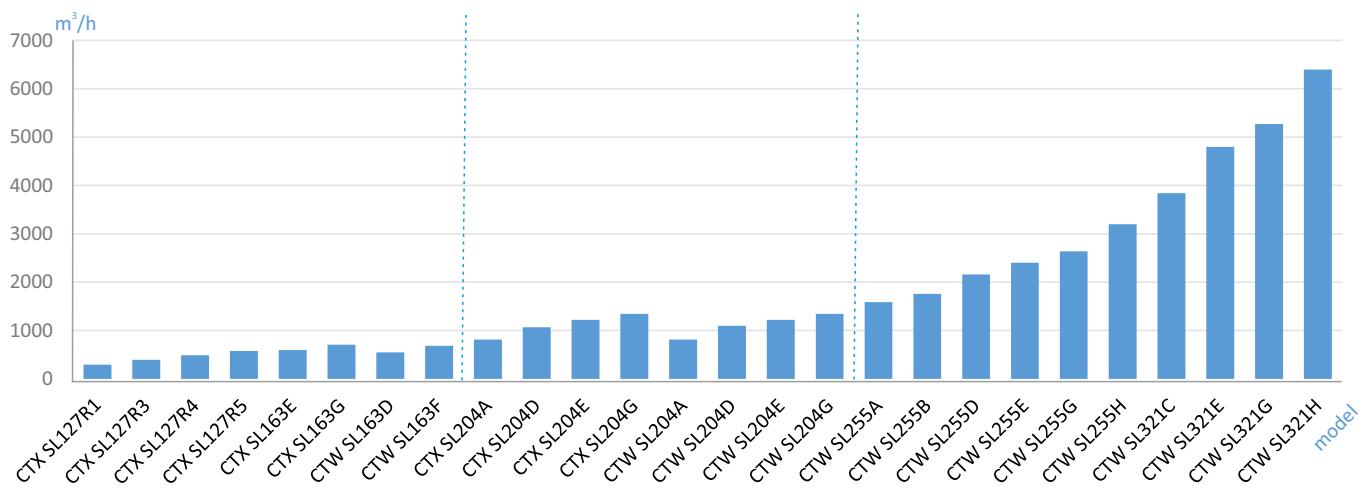

812 - 1348 m³/h

► **CTW SL 255, 321 & 365**

1590 - 6399 m³/h

Theoretical volumetric flow rate, 50 Hz

Standard design of COOLTECH compressor unit includes:

- ◆ Screw compressor
- ◆ Electric motor 380 V, 50-60 Hz
- ◆ Disc coupling
- ◆ Automatic control system UNICOOL
- ◆ Suction filter
- ◆ Horizontal or vertical oil separator (depending on the type of compressor unit)
- ◆ Oil system (oil cooler, oil filter, thermostatic valve)
- ◆ Oil pump (availability depends on the type of compressor unit)
- ◆ System of smooth capacity control 10-100%
- ◆ Safety valves
- ◆ Instrumentation and automation

OPTIONAL: system with frequency converter, explosion-proof design, double oil filter, economizer, antivibration mounts, high-voltage electric motor (6-10 kV)

Specifications

Cooltech Pack	Capacity (kw) *			
	Ammonia (R717)		Freon (R507)	
	-5 °C	-35 °C	-5 °C	-35 °C

with economizer

* Performance chart: external oil cooling, condensing temperature 35°C, liquid subcooling 2°C, suction superheat 5°C, speed 2950 rpm.

The calculation does not take into account the pressure loss at suction and discharge of the compressor.

Model range of higher capacity units is available on request.

Comparison of systems with a frequency converter and a slide valve
